

# Our sanitation protocol

At TorontoTooth we take every sanitary precaution necessary to make sure that our donations are delivered safely during the COVID-19 pandemic.

All products are handled with gloves and while wearing masks.

The oral hygiene products donated are sanitized using Lysol disinfecting wipes that are approved by government of Canada as effective against the SARS-CoV-2 (COVID-19 virus).

Then, the products will be placed in a plastic box sanitized with the same Lysol disinfecting wipes to be isolated for 14 days.

After the isolation period of 14 days, the supplies will be sanitized again with Lysol disinfecting wipes and be delivered to our community partner youth shelter.
